Heavy Rain Threat Returns

Moisture streaming into the region from the Caribbean will increase thunderstorm chances this weekend & early next week

- + Highest rain totals depend on where axis of tropical moisture sets up
- + Could see 2-4" totals Friday through Tuesday with locally higher amounts 6+" possible
- + Flash flood threat may increase by Monday depending on how much rain falls this weekend

Deep tropical moisture that will be piling up over the western Caribbean through the end of the week will get pulled into Southeast Texas this weekend. This rich moisture that will flow into the area through the weekend and into the start of next week will bring a threat for locally heavy rainfall. By Tuesday, rainfall amounts are expected to average 1 to 2 inches with isolated 3 to 6 inch or more totals, with the greatest concentration probably setting up along and south of the Highway 59 corridor, especially near and along the coast.

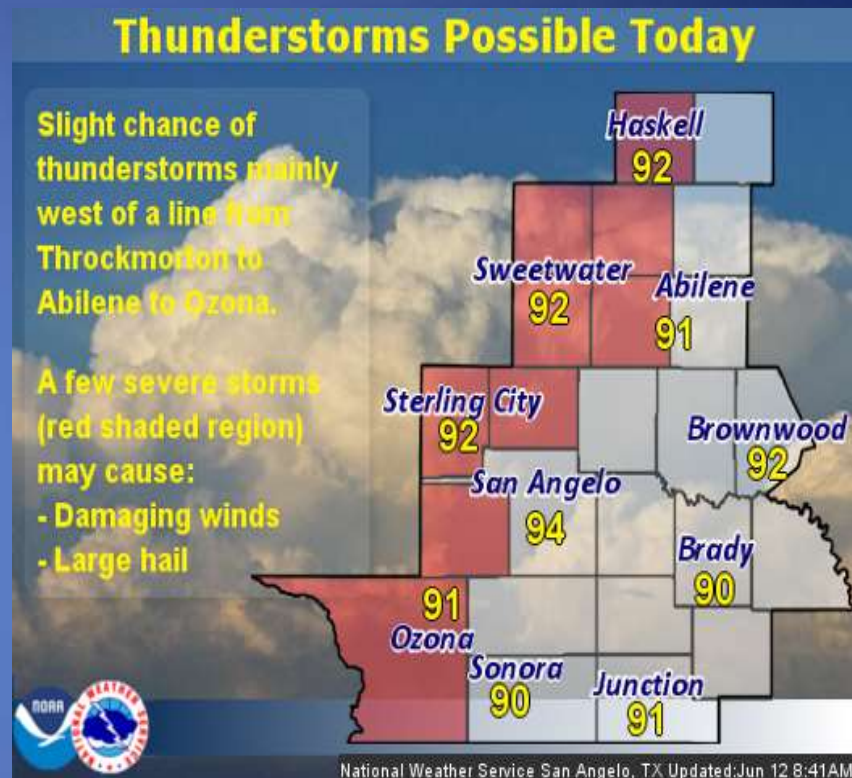

Thunderstorms will be possible today and tonight, east of an Artesia, to Pecos, to Marfa, to Presidio line, with best chances over the Western Low Rolling Plains. Any storms that do develop will be accompanied by frequent lightning, small hail, gusty winds, and brief, heavy rainfall. Some storms may be severe, producing large hail and damaging winds.

Hazardous Weather

It will be partly sunny today. There will be a slight chance of showers and thunderstorms across the northwest this morning. There will be a slight chance of afternoon thunderstorms east of the I-35 corridor. Highs will be in the upper 80s to lower 90s. Winds will southerly at 10 to 15 mph with some gusts over 20 mph likely during the afternoon.

There is a slight chance of thunderstorms this afternoon, mainly west of a line from Throckmorton, to Abilene, to Ozona. A few storms could become strong to severe, with the primary threats being damaging winds and large hail.

Hazardous Weather

More Thunderstorms Expected Today and Tonight

- Additional thunderstorms will develop this afternoon and continue into tonight
- Some storms may be severe
 - Primary hazards:
 - **Large hail**
 - **Damaging winds**
- Heavy rainfall also possible
 - Could lead to **flooding or flash flooding**
 - Flash Flood Watch in effect for the eastern Panhandles through Saturday morning

Flash Flood Watch

National Weather Service - Amarillo
